1. List all of the annotations you learned from class and homework to annotaitons.md

2. What is Spring and Springboot? What is the benfits of using Srpingboot?

3. What is IOC and What is DI?

4. What is `@CompnonentScan`?

5. How to define which package spring need to scan in xml and annotaiton?

6. What is `@SpringbootApplication`?

7. How many ways wo can define a bean?

8. What is default bean name for `@Component` and `@Bean`?

9. What is the difference between `@component` and `@service,@repository`?

10. How many annotaitons we can use to inject the bean?

11. Tell me the three types to do dependency injection(How can we inject the beans in Spring)? Which way is better and why?

12. If we have multiple beans for one type, how to set one is primary? and how to let the spring to pick one bean to inject if no primay.

13. What is the difference between BeanFactory and ApplicationContext in Spring?

14. What is the Scope of a Bean? and list the examples for each scope.

15. Configure a bean using xml. If bean has parameters/dependencies, how can we configure the bean? (you can google the tutorial how to configure beans in xml, and feel free to ask me any quesitons if you don't understand. it is a little bit old, I am not sure if I need to exaplain it in class)
